

Serialization Integration Partner

Why integrating a serialization system into the pharmaceutical supply chain?

The Dec Serialization equipment solutions are designed to simplify packaging processes. Our Serialization equipment solutions are compatible with all high-tech production facilities and software processes known in the pharmaceutical packaging industry, and can be customized according to the unique requirements and specifications of every individual customer.

The world is facing a persistent and increasing threat from adulterated prescription drugs. Serialization provides the opportunity to track and trace products from the smallest saleable unit throughout the complete supply chain, and from production site to patients who rely on medication for treatment of diseases.

Serialization Integration Partner

Track & Trace Serialization Solutions

From the smallest saleable unit to patients who rely on medication

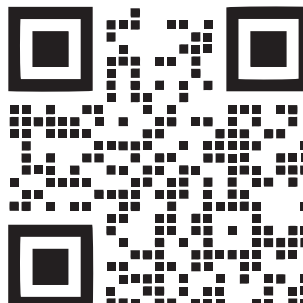

Serialization includes the complete set of history data of products, from the manufacturer to the end user. A unique serial number refers to specified information, e.g. product name, stock keeping unit, quantity, dosage, expiration date, lot and batch numbers, and might vary per region/country, complying with local regulations.

Is your facility ready for a serialization process?

Benefit from a strong network

Different local regulations demand for a local approach, flexible operational processes and compatible technical specifications. There is not a one size fits all solution that will serve the specific needs for each medicine, stock keeping unit or packaging line. The selection of the most suitable equipment supplier(s) for your serialization process is important. Dec has a strong network of reliable industry partners to integrate software, optical and printing components and specifications into your project scope.

Expert advice on optimization of utilities and equipment

Confidence in decision making

ISPE cGxP / Gamp® serialization standards and programs vary between different countries and regions. The serialization specialists at Dec offer full support for the integration of the serialization process in your supply chain. Dec offers expertise and advice to help you integrate the process in your operational system according to your specified standards as well as global and local regulations.

Independent of serialization software platform

The Dec Serialization equipment solutions are designed to simplify packaging processes. Our units cover a wide array of types and specifications. From low to high capacity machines and from manual to semi- and fully automated equipment depending on the type of packaging, Dec Serialization equipment is available for single case, bundle and pallet serialization.
